Case Report

Two Cases of Lymphadenopathy

Man-Yee Lee, Ming-Chi Luk and Emily Kun

Abstract: Lymphadenopathy is a common presentation in many diseases including connective tissue diseases, infection and malignancies. A detailed history, full physical examination, baseline and specific investigations are essential to make a definite diagnosis. We present two cases of lymphadenopathy with unusual diagnoses: Kikuchi's lymphadenitis and Kimura's disease. Both diseases are more commonly found in Asia and the Far East.

Keywords: Kikuchi's lymphadenitis, Kimura's disease, Lymphadenopathy
